

Mono Lake Outdoor Education Center

LEE VINING, CALIFORNIA

▲ Dining Hall

DESCRIPTION

Siegel & Strain developed a master plan for the Mono Lake Committee's Outdoor Education Center at a site near Mono Lake. The center will serve school groups and community groups from around the state who come to learn about the unique Mono Basin ecology and the effects of water use on this and other ecosystems.

The center includes a dining hall, classroom, administration building, bathhouse and bunkhouses. The project places a strong emphasis on water conservation, which will be reflected in plumbing fixtures, minimal landscaping, on-site wastewater treatment, and rainwater harvesting. This conservation ethic will be carried out in other aspects of the project such as efficient use of building materials, overall energy efficiency, and producing power on site with a photovoltaic system. The project will seek a LEED™ rating.

SIZE

9,000 sf

COST

\$5 Million (est.)

COMPLETED

2004 (Master Plan)
